

CORPORATE PRESENTATION

DECEMBER 2025

FORWARD LOOKING INFORMATION

This investor presentation contains certain statements, which may constitute “forward-looking information” under Canadian securities law requirements and “forward looking statements” under applicable securities laws (“forward-looking information”). All statements other than statements of historical fact contained in this presentation, including, but not limited to, statements with respect to the future financial position and results of operations, strategy, plans, objectives, goals and targets, anticipated commencement dates of mining or metal production operations, projected quantities of future metal production, anticipated production rates and mine life, operating efficiencies, costs and expenditures and conversion of mineral resources to reserves of GoGold Resources Inc. (“GoGold” or the “Company”), may constitute forward-looking information.

Forward-looking information can be identified by the use of words such as “could”, “expect”, “believe”, “will”, “may”, “intend”, “plan”, “estimate”, “anticipate”, “predict”, “project” and similar expressions and statements relating to matters that are not historical facts. Forward-looking information involves known and unknown risks and uncertainties and other factors, including those described under the heading “Risk Factors” in the annual information form of GoGold dated December 11, 2024 and in documents incorporated by reference therein, which may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by such forward-looking information. These factors include, among others, price volatility of gold, silver and other commodities; volatility of commodity prices and other input costs; mining industry operational hazards and environment concerns; uncertainty of estimates of mineral resources and mineral reserves; requirements for additional financing which may not be available; changes in political conditions or governmental policies and political and financial instability in México; government regulation and requirements for permits and licenses and competition.

Forward-looking information is based on assumptions that the Company believes to be reasonable. Key assumptions upon which the Company’s forward-looking information is based include, but are not limited to: that the price of gold and silver will not decline significantly nor for a lengthy period of time; that the Company will have sufficient working capital and be able to secure additional funding necessary for the continued operation, exploration and development of the Company’s property interests; and that key personnel will continue their employment with the Company.

Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking information, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking information. The forward-looking information in this presentation is made as of December 11, 2025 and the Company undertakes no obligation to publicly update or revise any forward-looking information, whether as a result of new information, future events or otherwise, other than where a duty to update such information or provide further disclosure is imposed by applicable law.

Mr. David Duncan, P. Geo. is the qualified person as defined by National Instrument 43-101 and is responsible for the technical information in this presentation related to Los Ricos North and Los Ricos South.

Mr. Robert Harris, P.Eng. is the qualified person as defined by National Instrument 43-101 and is responsible for the technical information in this presentation related to Parral.

Highlights of 2024 Sustainability Report

2024

 **GoGold**

**Sustainability
Report**

Improved water storage and reuse system at Parral, achieving over 95% recycling efficiency and resulting in decrease of 5% in water usage compared to the prior year.

0.005 tCO₂e per oz of silver equivalent produced at Parral, a decrease of 11% compared to prior year.

Awarded the ESR distinction (Empresa Socialmente Responsables – Corporate Social Responsibility) for fifth year.

ELSSA distinction from the Instituto Mexicano del Seguro Social (IMSS), a public healthcare and social security institution in Mexico, for the third time.

\$17.6 million USD spent in local purchases, including \$247,000 in community investment.

Donation of over 1,200 machine hours to nearby towns in order to help with local infrastructure.

Social impacts in nearby communities include providing food packages to elderly, cultural events, educational and sports supplies to local children and medical attention to residents.

	Inferred	2.2	106	1.11	0.27	2.70	229	7,473	79	13.0	191	16,191

- 1) Mineral Resources, which are not Mineral Reserves, do not have demonstrated economic viability. The estimate of Mineral Resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues.
- 2) The Inferred Mineral Resource in this estimate has a lower level of confidence than that applied to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. It is reasonably expected that the majority of the Inferred Mineral Resource could be upgraded to an Indicated Mineral Resource with continued exploration.
- 3) The Mineral Resources were estimated in accordance with the Canadian Institute of Mining, Metallurgy and Petroleum (CIM), CIM Standards on Mineral Resources and Reserves, Definitions and Guidelines (2014) prepared by the CIM Standing Committee on Reserve Definitions and adopted by the CIM Council and CIM Best Practices Guidelines (2019) and have an effective date of January 14, 2025.
- 4) Historically mined areas were depleted from the Mineral Resource model.
- 5) The pit-constrained AgEq cut-off grade of 40 g/t was derived from \$1,850/oz Au price, \$23.75/oz Ag price, 86% Ag and 95% Au process recovery, \$28/tonne process and G&A cost. The constraining pit optimization parameters were \$2.10/t mineralized material and waste mining cost, and 45-degree pit slopes.
- 6) The Cerro Colorado Mineral Resource was constrained to open pit mining methods only; Out-of-pit Mineral Resources are restricted to the Eagle and Abra mineralized veins, which exhibit historical continuity and reasonable potential for extraction by cut and fill and longhole underground mining methods.
- 7) The out-of-pit AgEq cut-off grade of 130 g/t Ag was derived from \$1,850/oz Au price, \$23.75/oz Ag price, 86% Ag and 95% Au process plant recovery, \$30/tonne process and G&A cost, and a \$60/tonne mining cost. The out-of-pit Mineral Resource grade blocks were quantified above a 130 g/t AgEq cut-off, below the constraining pit shell and within the constraining mineralized wireframes. Out-of-Pit Mineral Resources are restricted to the Eagle and Abra Veins, which exhibit historical continuity and reasonable potential for extraction by cut and fill and longhole mining methods.
- 8) AgEq and AuEq were calculated at an Ag/Au ratio of 86:1 for pit-constrained and out-of-pit Mineral Resources.
- 9) Totals may not sum due to rounding.

Probable	2,140	72.1	0.64	0.03	129.7	4,961	44	1.4	8,924
Subtotal Open Pit	2,720	76.9	0.66	0.02	135.9	6,728	57	1.7	11,889
Total									
Proven	4,482	175.2	1.49	0.08	311.6	25,240	215	7.7	44,904
Probable	5,751	122.3	1.31	0.13	247.8	22,607	241	16.1	45,819
Total Proven & Probable	10,233	145.4	1.39	0.10	275.7	47,847	457	23.8	90,723

- 1) Mineral Reserves are based on Measured and Indicated Mineral Resource Classifications only.
- 2) Mineral Reserves are reported using the 2014 CIM Definition Standards and 2019 Best Practices Guidelines and have an effective date of January 14, 2025.
- 3) Mineral Reserves are defined within mine plans and incorporate mining dilution and ore losses.
- 4) Open Pit Mineral Reserves are based on metal prices of \$23.75/oz Ag, \$1,850/oz Au and \$4.00/lb Cu, and are constrained within optimized pit shells and designs that use 45-48° overall wall slopes, and process recoveries of 86% Ag, 95% Au and 51% Cu.
- 5) An Open Pit cut-off grade of 46.4 g/t AgEq is estimated to differentiate ore from waste and is based on cost assumptions of \$26.22/t processing, \$4.11/t site general and administrative, and 0.5% government mining tax on net revenue. Mining costs are estimated at \$2.10/t of ore and waste rock.
- 6) Underground Mineral Reserves are based on metal prices of \$23.75/oz Ag, \$1,850/oz Au and \$4.00/lb Cu, and are constrained within a mine design, and use process plant recoveries of 86% Ag, 95% Au and 77% Cu.
- 7) An Underground marginal cut-off grade of 150 g/t AgEq is estimated to differentiate ore from waste, and is based on cost assumptions of \$34.93/t processing, \$4.46/t site general and administrative, and mining costs of \$41.93/t. An Underground economic cut-off grade of 210 g/t AgEq is estimated to account for capital development costs of \$53.86/t in addition to those used to calculate the marginal cut-off grade.
- 8) Totals may not sum due to rounding.

LOS RICOS SOUTH FEASIBILITY STUDY – HIGHLIGHTS

After-Tax net present value (“NPV”) (5%) of US\$355 million with an After-Tax IRR of 28% (Base Case);

At approximate spot metal silver price of \$41/oz and gold price of \$3,580/oz, NPV (5%) of US\$862 million with an After-Tax IRR of 52%;

15-year mine life producing a total of 80 million payable AgEq Oz, consisting of 41 Moz Ag, 424 Koz Au, 11Mlb Cu

Initial capital costs of \$227 million, including \$21 million in contingency costs, over an expected two year build, and sustaining capital costs of \$100 million over the life of mine;

Average operating cash costs of \$9.94/oz AgEq, and AISC of \$11.19/oz AgEq over first 5 years of production, with average AISC of \$12.32/oz AgEq over the underground mine life;

Average annual production of 7.3 million AgEq oz over first 5 years;

Successful conversion of Mineral Resources to Proven and Probable Mineral Reserves totalling 10.2 million tonnes grading 276 g/t AgEq containing 91 Moz AgEq, including 7.5 million underground tonnes grading 326 g/t AgEq;

Average underground mining width of 11 metres using bulk mining method of longitudinal sub-level long-hole mining;

Total Inferred	20.5						1.51	111	148	49,019				992	73,198

- El Orito is a silver-base metal sulfide zone, all other deposits are silver-gold oxide zones.
- Mineral Resources which are not Mineral Reserves do not have demonstrated economic viability. The estimate of Mineral Resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues.
- The Inferred Mineral Resource in this estimate has a lower level of confidence than that applied to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. It is reasonably expected that the majority of the Inferred Mineral Resource could be upgraded to an Indicated Mineral Resource with continued exploration.
- The Mineral Resources in this news release were estimated in accordance with the Canadian Institute of Mining, Metallurgy and Petroleum (CIM), CIM Standards on Mineral Resources and Reserves, Definitions and Guidelines (2014) prepared by the CIM Standing Committee on Reserve Definitions and adopted by the CIM Council and CIM Best Practices (2019).
- Historically mined areas were depleted from the Mineral Resource model.
- Approximately 98.9% of the indicated and 91.3% of the Inferred contained AgEq ounces are pit constrained, with the remainder out-of-pit. See tables 4 and 6 for details of the split between pit constrained and out-of-pit deposits.
- The pit constrained AgEq cut-off grade of 29 g/t Ag was derived from US\$1,550/oz Au price, US\$21/oz Ag price, \$3.66\$/lb Cu, \$0.90 \$/lb Pb, \$1.26 \$/lb Zn, 93% process recovery for Ag and Au, 90% process recovery for Cu, 80% process recovery for Pb and Zn, US\$18/tonne process and G&A cost. The constraining pit optimization parameters were \$2.00/t mineralized mining cost, \$1.50/t waste mining cost and 50-degree pit slopes.
- The out-of-pit AuEq cut-off grade of 119 g/t Ag was derived from US\$1,550/oz Au price, US\$21/oz Ag price, \$3.66\$/lb Cu, \$0.90 \$/lb Pb, \$1.26 \$/lb Zn, 93% process recovery for Ag and Au, 90% process recovery for Cu, 80% process recovery for Pb and Zn, \$57/t mining cost, US\$18/tonne process and G&A cost. The out-of-pit Mineral Resource grade blocks were quantified above the 119 g/t AgEq cut-off, below the constraining pit shell within the constraining mineralized wireframes and exhibited sufficient continuity to be considered for cut and fill and longhole mining.
- No Mineral Resources are classified as Measured.
- AgEq and AuEq calculated at an Ag/Au ratio of 73.8:1.

LOS RICOS NORTH RESOURCE SENSITIVITY

The Cut-off sensitivities chart is only for Pit Constrained Mineral Resources, and does not include the Out-Of-Pit Mineral Resource Estimates of **6.4 AgEq Moz** Inferred and **0.9 AgEq Moz** Indicated at 119 g/t AgEq cut-off grade.

LOS RICOS NORTH PEA - HIGHLIGHTS

After-Tax NPV(5%) of \$413 Million with an After-Tax IRR of 29% (Base Case)

13-year mine life producing a total of 110M AgEq Oz, consisting of 68M Ag Oz, 222K Au Oz, 23M lb Cu, 144M lb Pb, 242M lb Zn

Initial capital costs \$221M over 18 months, including \$29M contingency, expansion capital \$137M, sustaining capital \$5M

Average LOM operating cash costs of \$9.50/oz AgEq, AISC of \$9.68/oz AgEq

Average annual production of 8.8 million AgEq oz in years one through twelve

Approximately 3/4 of LOM production is from oxide, 1/4 sulphide

At \$41 Silver / \$3,580 Gold – After-Tax NPV(5%) of \$1,176M with IRR of 66%

PARRAL – SART ZINC UPDATE

Commissioning Completed January 2024

Zinc Circuit Benefits:

- Cyanide regeneration, providing significant cost savings
- Increased copper precipitate quality
- Saleable zinc precipitate to be produced
- Cleaner solution flow to increase silver / gold recoveries
